By Venus Geoscience Tutorial and Venus

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 68 pages. Original publisher: Houston, Tex. : Lunar and Planetary Institute, 1989 OCLC Number: (OCoLC)70679373 Excerpt: . . . Models for Tessera Terrain D. L. Bindschadler and J. W. Head Models A number of models have been suggested for the formation of tessera terrain 2, 14, 15 . From these and other tectonic models, we set forth working hypotheses for the formation of tessera, which are divided into three formational models (those which produce the high topography of the tessera) and two modificational models (those in which deformation results from high topography). Horizontal convergence end crustal thickening may be driven by in-plane lithospheric stresses (as on Earth) or by flow within the mantle of Venus 16, i7 . In general, convergent motion is expected to result in high topography, steep topographic slopes, and fold-and-thrust deformation at the surface. Crustal compensation of topography should result in a relatively small LOS anomaly over regions of tessera, given predicted crustal thicknesses for Venus of 30 km 18 . In addition, both strike-slip and extensional deformation are observed in terrestrial orogens such as the India-Asia collision...

Reviews

Basically no words to describe. It is filled with knowledge and wisdom I am just pleased to let you know that this is actually the greatest publication i have read within my individual lifestyle and may be he best publication for at any time.

-- ***Prof. Ron Gaylord II***

This publication may be really worth a go through, and a lot better than other. It really is full of knowledge and wisdom Its been printed in an exceptionally easy way in fact it is simply after i finished reading this publication by which basically modified me, affect the way i really believe.
