Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from The Formation of Colloids Owing to the rapid development of the science of colloids, it has become a rather difficult task to write a complete and modern text-book on this subject. The literature containing the primary material is very great, and grows greater every day. It seemed, therefore, worth while to try to give a survey of the chemistry and physics of colloids in the form of a series of small monographs, treating the main parts of the science separately. In this way it is possible to move more freely and select the problems to be reviewed according to their importance for the subject. Moreover, a series of monographs can easily be kept up to date by bringing out new editions of the books dealing with those parts of the subject that develop with special rapidity. In the first monograph I mean to give a survey of the processes which cause the formation of colloids - or of heterogeneous systems with a relatively large boundary surface on the whole (disperse systems according to Wo. Ostwald) - especially with regard to the conditions that determine the degree of subdivision of the systems formed. As the formation of gels is a change of state within the disperse system, it will not be considered in this monograph, which deals with the formation of colloids from non-colloid material, but will be treated in one of the following monographs. In order to bring forth the leading ideas as clearly as possible, I have refrained from giving detailed directions for the preparation of the various colloids. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find...
