Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from A Problem Course in Chemistry This course uses chemical operations to teach the pupil to think in terms of chemistry. The numerous problems offer little mathematical difficulty, but much drill in chemical science. The mathematical element is merely incidental; the aim is to lead the pupil to understand the chemical principle involved in the problem. The object has been not to set an arbitrary standard for other teachers to follow, but to compile such a set of problems as will meet the needs of the individual teacher and the individual student. In the interest of variety and thoroughness, more than six hundred problems are furnished, although the authors have found in their own classes that one hundred and fifty of these exercises, related to the laboratory and text-book material, provide a satisfactorily balanced year s work. The fundamental principles essential to an intelligent understanding of the calculations are presented in a clear and simple manner. Emphasis is laid upon the fact that all relationships in chemistry are quantitative, and means are provided for the solution of problems commonly met in general chemistry. It has been deemed advisable to call attention to the typical and characteristic reactions of the chemistry of the home, of the laboratory, and of industry. The data provided in the tables have been collected from standard works of reference. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
