Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1884. Excerpt: . . . APPENDIX B. Observations on the Geological Formations Nos. II, III, IV, V, VI, VII VIII in Center County. By A. L. Ewing, Prof. OeoU and Zool. , State CoUnjr. . Formation No. II Trenton, Chazy, Calciferous, and c. Formation No. II is not sharply divisible into epochs corresponding t those recognized in New York. It consists of layers of sandstone and arenaceous limestone below, producing a sandy soil, while the upper portion consists of a blue, argillaceous, clay-producing limestone. Between these are all varieties of intermediate grades. Below, the limestone is more thoroughly impregnated with carbonate of magnesia; dolomite and limestone succeeding each other in alternating layers to a marked extent. The core of the Stale College well, taken from the lower part of the series, illustrates the above points. It represents over 100 feet of strata, and shows, with the more pure and compact...
