The plan of instruction which it develops is believed to be strictly inductive, truly progressive, and thoroughly practical. Beginning with the smaller numbers and easier combinations, it first presents the operations of addition and subtraction, and then those of multiplication and division. It next treats of multiples and divisors, fractions, interest, profit and loss, partnership, and such other subjects pertaining to business life as the limits of the work will allow. In every part of the book, the operations required are carefully illustrated and explained, and copious exercises are given to insure skill and readiness in their practical application.
